NP200ETA-1 School Bus tracking Unit /w snap shots

The School Bus unit features tracking of buses and students. Each student is identified by an RFID tag or DPB being activated by operator every time a student boards the bus, each has a unique identification number. Alternately, a motion detector can be used to activate snap shots. GPS routing RFID activations are updated every 2 minutes on secure web based LCON system. Bus routes and Estimated Time of Arrival (ETA) apps are available in smart cellular phones for use by parents and others at no cost. 2-minute video clips for Cameras 1 & 2 are saved locally and transmitted to school network when bus is within range of school WiFi network. Student attendance rosters are created based on RFID system and available for school personnel.

Free School Bus ETA App for smart phones
